

C&J Energy Services

# WE DELIVER WHAT OTHERS CAN'T.

## CASED HOLE SOLUTIONS

## TRU-MILL™ COMPOSITE PLUG

**C&J's Composite Plugs are engineered to meet today's market demands of low-cost, high performance, and highly reliable completion tools.**

### TRU-MILL™ COMPOSITE PLUG ADVANTAGES:

- One of the shortest 5.5 in. plugs on the market at 23 in.
- High performance mandrels that are thinner than the competition, making them easier to mill through and flow back
- Solid, single ring slips with minimal cast iron which are stronger and more consistent in performance than composite button slips
- Simple—utilizes a single element system, which reduces the risk of failure
- Solid backup ring minimizes risk of presets
- Includes anti-rotation features for consistency in milling
- Through engineering and materials expertise, C&J's plug utilizes more molded components than most competitive plugs. Molded parts are high performing and cost effective with greater consistency in quality and material.

EXCELLENCE DELIVERED.
